

Solar Storm towards Earth

heading

CESAR Scientific Challenge

Calculate the Sun rotation with
ESA SOHO satellite

Beatriz González García on behalf of the CESAR Science Cases Team

European Space Agency

Slide 1

S.O.S! Solar Storm heading towards Earth

Message from the European Space Agency's missions monitoring the Sun:

"S.O.S! STOP. S.O.S! STOP. SOHO has detected a CME towards Earth. STOP. Take cover! STOP. "

Solar Orbiter has confirmed that the CME is coming to Earth.

Challenge ID	Team Number (1-6):			
Members				
Professions	Mathematics Software Engineer	Astrophysicists	Engineers	Biologists/ physicist
Roles	Leads the correct execution of the calculations	She/he guides the solar telescope	She/he is in charge of finding agreements and leading the team.	She/he addresses the need for further research.
References	<u>Katherine Johnson</u>	<u>Vera Rubin</u>	<u>Samantha Cristoforetti</u>	<u>Marie Curie</u>
(female)				
(male)	<u>Steve Wozniak</u>	<u>Matt Taylor</u>	<u>Pedro Duque</u>	<u>Albert Einstein</u>
				

Fast Facts

- **Recommended target age range:** (14-16) years old
- **Recommended academic courses:** (3-4) ESO
- **Type:** Student activity, **Complexity:** Medium
- **Teacher preparation time:** (2+) hours, depending on the Type of Experience and contents selected.
- **Lesson time required:** (4 hours – several days), depending on the Type of Experience and contents selected by the teacher.
- **Location:** Indoors
- **Includes use of:** Computers, internet

The students should already know...

- The concepts of velocity and acceleration.
- The equation of uniform line motion and uniformly accelerated line motion.
- Time units conversion.

Curriculum relevance

Physics and Chemistry

- The need of strategies in the scientific activity, the use of ICT and communication skills. Research project.
- Uniform and uniformly accelerated line movement.
- The periodic system of the elements. The chemical reaction.
- Errors in measurement

Mathematics

- Planning of the problems solution process. Generation and presentation of scientific forms. Mathematical studies of daily life concepts.
- Interpretation of phenomena by statements, data in tables/plots or by analytical expressions.

Scientific culture

- The scientific method. The use of ITC.
- Research and exploration of the Universe. The solar system. The evolution of the stars and the origin of the elements.
- Working in teams. Debates.

Students will learn ...

- The basics of solar activity.
- How to make scientific measurements.
- How to obtain information from astronomical images.

Students will improve ...

- Their understanding of scientific thinking.
- Their strategies of working scientifically.
- Their teamwork and communication skills.
- Their evaluation skills.
- Their ability to apply theoretical knowledge to real-life situations.
- Their skills in the use of ICT.

What did you know?

Menti.com – what do you know about the Sun?

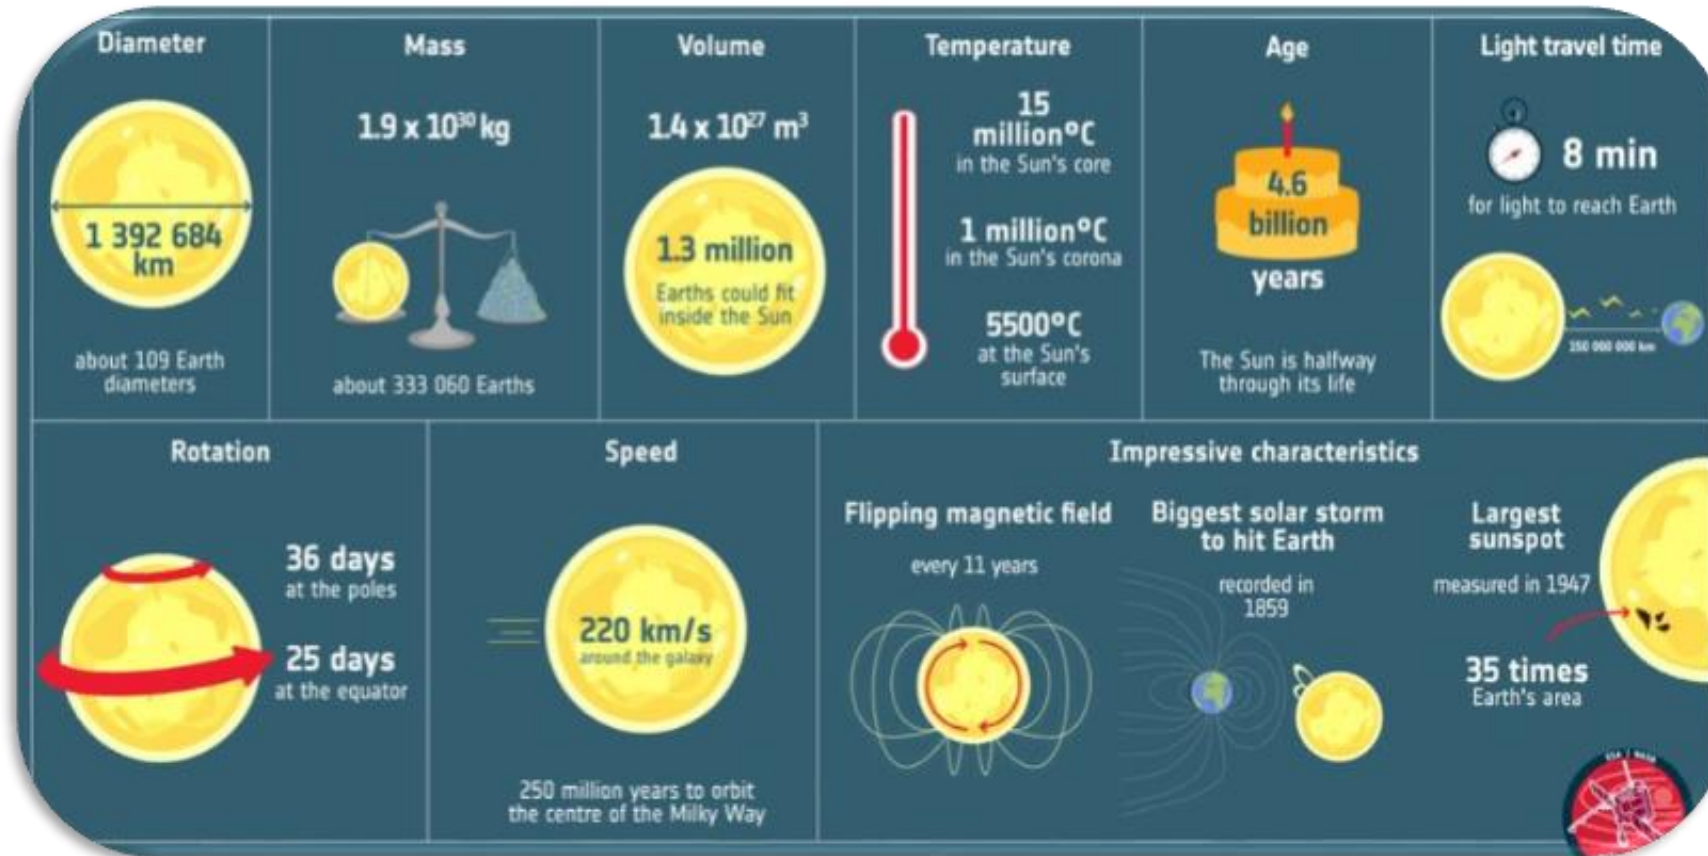

[Features](#) [Solutions](#) [Pricing](#) [Blog](#)

Code 19 43 39 2

1. The Sun

The Sun is a star of hot ionized gas or "plasma", which generates energy through nuclear reactions inside it, consuming about four million tons of hydrogen fuel every second.

1.1 The Sun Structure

2. The magnetic activity of the Sun

- The Sun is a large ball of gas in a state of plasma. Its gaseous ionized material circulate through its magnetic fields that come out of the interior crossing the surface of the sun.
- The magnetic activity of the Sun produces numerous effects, which together are known as solar activity.

2.2 The influence of the Sun on the Earth

The Sun is the star that allows the existence of life (zone of habitability), as we know it on Earth, and the variations in its activity impact on Earth at many levels.

What impact do you think it has on the Earth? Answer in the Chat

2.2 The influence of the Sun on the Earth

What impact do you think it has on the Earth? Answer in the Chat

2.2 The influence of the Sun on the Earth

Do you think there is any relationship between the Sun and the Northern Lights?

Answer in the Chat

2.2 The influence of the Sun on the Earth

Do you think there is any relationship between the Sun and the Northern Lights?

Answer in the Chat

The Earth is protected by a magnetic field, which is the union point between the Earth and Space, and the charged particles, emitted by the Sun, can produce very impressive visual effects, such as the Northern Lights.

2.2 The influence of the Sun on the Earth

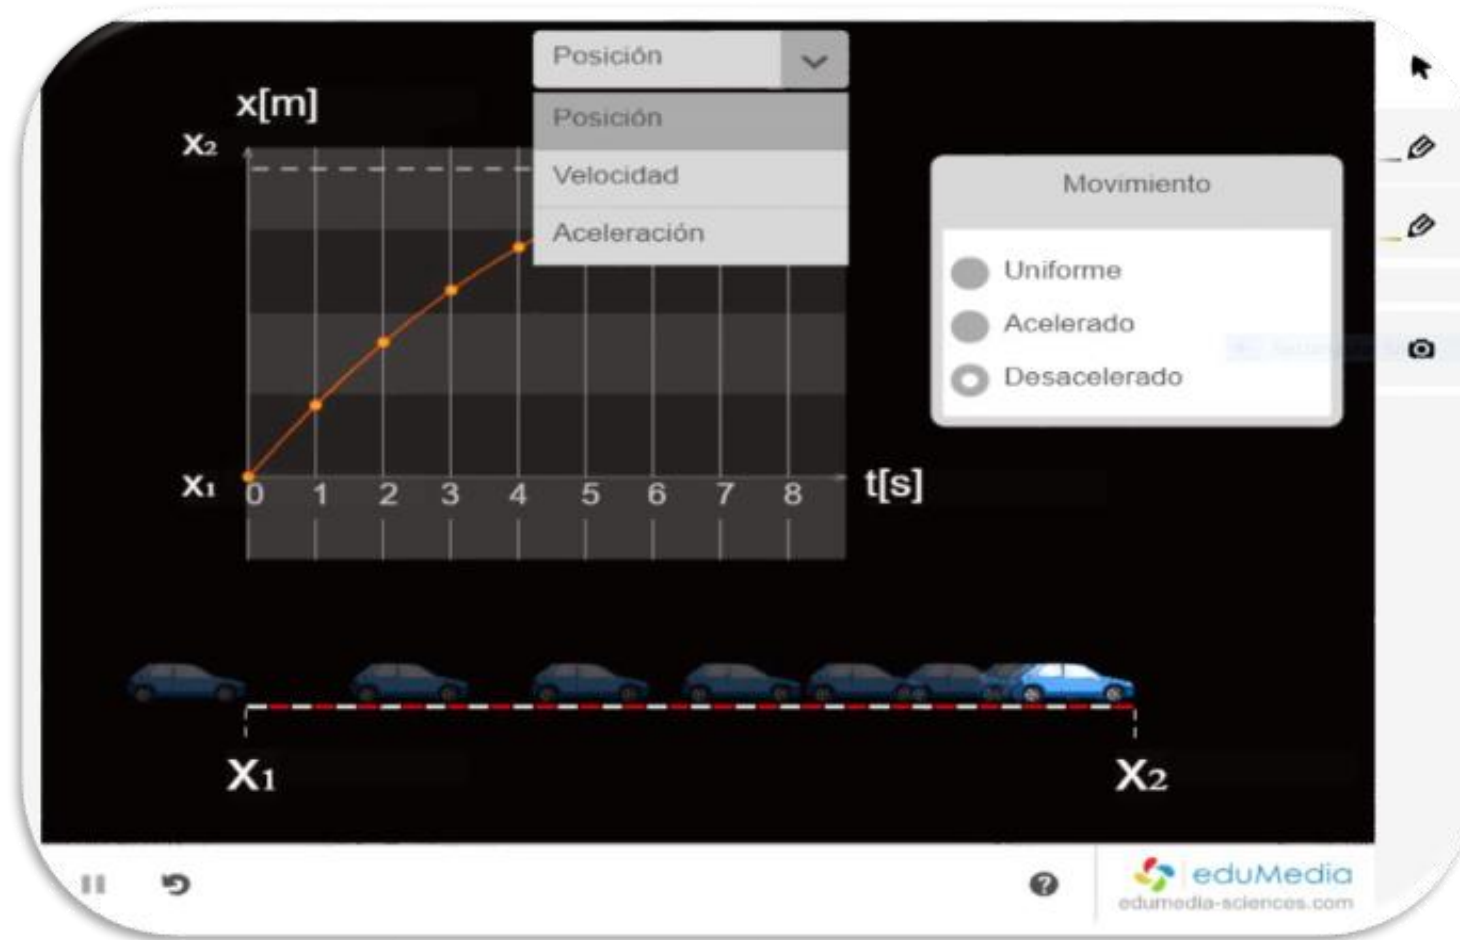

The Sun is the star that allows the existence of life on Earth

(circumstellar habitable zone simulator)

Rectilinear uniform motion and Motion under constant acceleration:

Step 1

How long would it take for a solar storm to reach Earth?

(Linear Uniform Movement)

Hypothesis

How long would it take for a solar storm to reach Earth?

Answer in the Chat

REAL SCIENTIFIC DATA

Access to of the Sun taken by the [SOHO](#)

You will inspect the evolution of a **CME over several days** to calculate its speed and time to arrive to Earth

FAST FACTS

SOHO

Launch date:	02-Dec-1995 08:08 UT
Mission end:	31 December 2022 (subject to a mid-term review in 2020)
Launch vehicle:	Atlas II-AS (AC-121)
Launch mass:	1850 kg
Mission phase:	Operational
Orbit:	SOHO is operated from a permanent vantage point 1.5 million kilometers sunward of the Earth in a halo orbit around the first Lagrangian point.
Achievements:	<p>Discoveries from SOHO include:</p> <ul style="list-style-type: none"> ▪ Complex currents of gas flowing beneath the visible surface of the Sun ▪ Rapid changes in the pattern of magnetic fields <p>SOHO has:</p> <ul style="list-style-type: none"> ▪ Made the largest and most detailed database of solar surface features. ▪ Become the most prolific discoverer of comets in the history of astronomy, although not designed for the purpose.

REAL SCIENTIFIC DATA

ACCESS TO THE DATA REAL SCIENTIFIC DATA

Coronal Mass Ejections v1.0

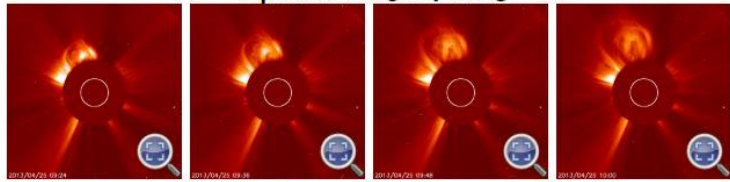

Step: 1/4
Select the images

Opción 1 - 05-04-2013

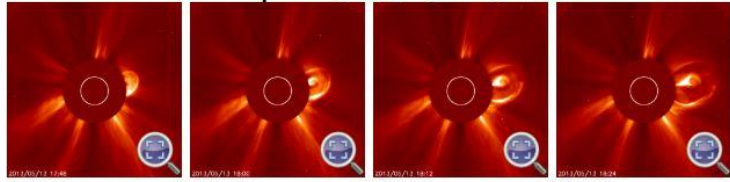

Select set 1

Opción 2 - 25-04-2013

Select set 2

Opción 3 - 13-05-2013

Select set 3

Choose 1 set of images of the Sun, taken by SOHO satellite. You will use them to measure the velocity of a Coronal Mass Ejection (CME).

Tip: you can inspect the images with the magnifier.

- The CESAR web tool http://cesar.esa.int/tools/15.coronal_mass_ejections/index.php?

Procedure

- **Step 1/4: Choose a set of images** (for example, **Option 3**). Each of them corresponds to four consecutive images of the evolution of an ejection on different dates.

Coronal Mass Ejections v1.0

Step: 1/4
Select the images

Opción 1 - 05-04-2013

Select set 1

Opción 2 - 25-04-2013

Select set 2

Opción 3 - 13-05-2013

Select set 3

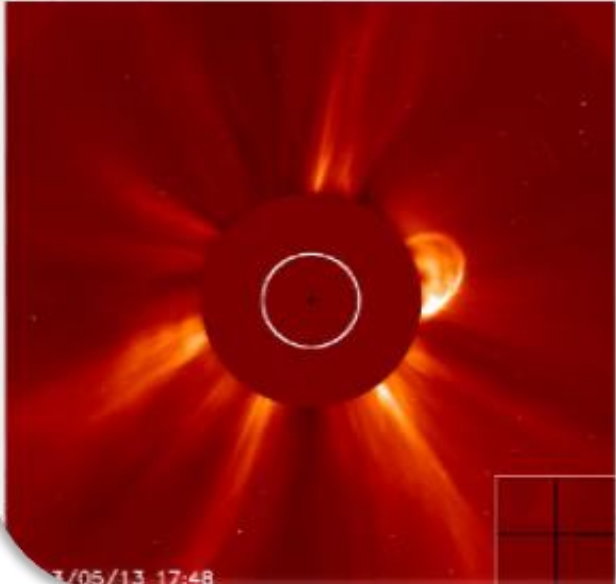

Choose 1 set of images of the Sun, taken by SOHO satellite. You will use them to measure the velocity of a Coronal Mass Ejection (CME).

Tip: you can inspect the images with the magnifier.

- **Step 2/4 (I): Calculate the radius of the Sun** to know the scale of the image.
 - Click with the mouse on the center of the Sun (black cross) and then on any part of the white circle

Coronal Mass Ejections v1.0

Step: 2/4
Measure the distance the CME has moved away from the Sun

Task 1
Measure the radius of the Sun. Remember that the Sun is the white circle

Sun radius

Task 2
Measure the CME

- Select the box with the first image.
- Click on the centre of the Sun (the black cross) and then click on the edge of the CME that is furthest away from the Sun.
- Repeat for each image.

13-05-2013 17:48		Measure
13-05-2013 18:00		Measure
13-05-2013 18:12		Measure
13-05-2013 18:24		Measure

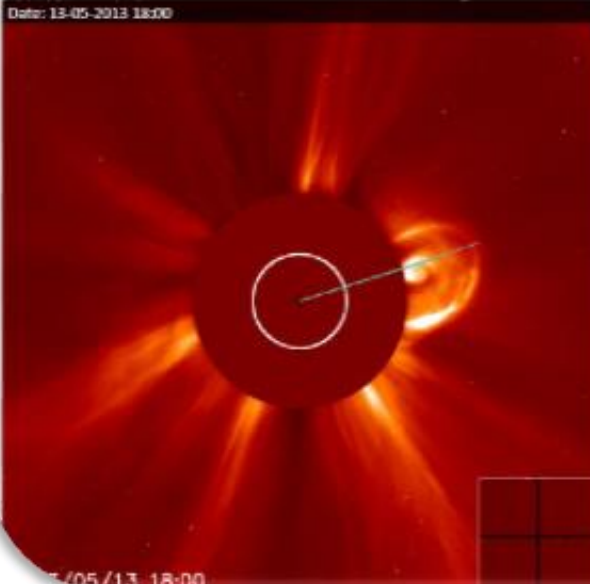

- **Step 2/4 (II): For each image measure the length of the coronal mass ejection.**

- **Step 2/4 (I): Calculate the radius of the Sun** to know the scale of the image.
 - Click with the mouse on the center of the Sun (black cross) and then on any part of the white circle

Coronal Mass Ejections v1.0

Step: 2/4
Measure the distance the CME has moved away from the Sun

Date: 13-05-2013 18:00

13/05/13 18:00

Task 1
Measure the radius of the Sun. Remember that the Sun is the white circle

41 pixels | 695 842km

Task 2
Measure the CME

- Select the box with the first image
- Click on the centre of the Sun (the black cross) and then click on the edge of the CME that is furthest away from the Sun
- Repeat for each image.

13-05-2013 17:48		132 pixels 2 240 272km
13-05-2013 18:00		162 pixels 2 749 424km
13-05-2013 18:12		Measure
13-05-2013 18:24		Measure

- **Step 2/4 (II): For each image measure the length of the coronal mass ejection.**

- **Step 3/ 4: Calculates the speed of ejection between images.**
 - Fill in in the numerator the length of the ejection CME.
 - Fill in the denominator with the time difference between the image(N) and image(N-1), **in seconds.**

Coronal Mass Ejections v1.0

Step: 3/4
Calculate the velocity of the CME

Image	Distance (km)	Date
Image 1	2 872 579	25-04-2013 09:24
Image 2	3 354 315	25-04-2013 09:36
Image 3	3 818 210	25-04-2013 09:48
Image 4	4 175 052	25-04-2013 10:00

Calculate the velocity

$V_{1-2} = \frac{\text{[] km} - \text{[] km}}{\text{[] s}} = \text{[] km/s}$

$V_{2-3} = \frac{\text{[] km} - \text{[] km}}{\text{[] s}} = \text{[] km/s}$

$V_{3-4} = \frac{\text{[] km} - \text{[] km}}{\text{[] s}} = \text{[] km/s}$

Input the distance the CME has travelled and the time difference between each image. Click to Calculate.

Back
Continue

- **Step 3/ 4: Calculates the speed of ejection between images.**
 - Fill in in the numerator the length of the ejection CME.
 - Fill in the denominator with the time difference between the image(N) and image(N-1), **in seconds.**

Coronal Mass Ejections v1.0

Step: 3/4
Calculate the velocity of the CME

Image 1
Distance: 2 240 272 km
Date: 13-05-2013 17:48

Image 2
Distance: 2 749 424 km
Date: 13-05-2013 18:00

Image 3
Distance: 3 173 718 km
Date: 13-05-2013 18:12

Image 4
Distance: 3 665 899 km
Date: 13-05-2013 18:24

Calculate the velocity

$$V_{1-2} = \frac{2749424 - 2240272 \text{ km}}{720 \text{ s}} = 707.16 \text{ km/s}$$

$$V_{2-3} = \frac{3173718 - 2749424 \text{ km}}{720 \text{ s}} = 589.3 \text{ km/s}$$

$$V_{3-4} = \frac{3665899 - 3173718 \text{ km}}{720 \text{ s}} = 683.58 \text{ km/s}$$

Input the distance the CME has travelled and the time difference between each image. Click to Calculate.

- **Step 4/4 (I): Calculate the average ejection speed.**
 - Use the values of the three instantaneous speeds (calculated between pairs of images) in Step 3 and calculate the average speed.

Coronal Mass Ejections v1.0

Step: 4/4
Calculate the time it takes the CME to reach the Earth

Velocity for each pair of images:	Calculate the average velocity	Calculate the time
$V_{1-2} = 707.16 \text{ km/s}$ $V_{2-3} = 589.30 \text{ km/s}$ $V_{3-4} = 683.58 \text{ km/s}$	Now you have to calculate the average velocity, and then use this information to calculate the average time it takes to reach the Earth. $V_m =$ <input type="text"/> km/s	Calculate the average time that the CME takes to arrive to the Earth. Fill the inputs with the distance and time difference before clicking next button. $t_m =$ <input type="text"/> km - <input type="text"/> s 660.013 km/s

Tip: Sun-Earth distance = 150 000 000 km

- **Step 4/4 (II): Calculate the time it would take for the ejection to travel the Sun-Earth distance.**
 - Enter the average speed you have calculated into the tool.
 - Enter the Sun-Earth distance, which is 150 000 000 km

Coronal Mass Ejections v1.0

Step: 4/4
Calculate the time it takes the CME to reach the Earth

Velocity for each pair of images:	Calculate the average velocity	Calculate the time
$V_{1-2} = 707.16 \text{ km/s}$ $V_{2-3} = 589.30 \text{ km/s}$ $V_{3-4} = 683.58 \text{ km/s}$	Now you have to calculate the average velocity, and then use this information to calculate the average time it takes to reach the Earth. $V_m = $ <input type="text" value="660.013"/> km/s	Calculate the average time that the CME takes to arrive to the Earth. Fill the inputs with the distance and time difference before clicking next button. $t_m = $ <input type="text" value="150000000"/> km - <input type="text" value="227268.25"/> s 660.013 km/s

Tip: Sun-Earth distance = 150 000 000 km

Team 2

Team 4

Team 3

Coronal Mass Ejections v1.0

Step: 1/4
Select the images

Opción 1 - 05-04-2013

Select set 1

Opción 2 - 25-04-2013

Select set 2

Opción 3 - 13-05-2013

Select set 3

Choose 1 set of images of the Sun, taken by SOHO satellite. You will use them to measure the velocity of a Coronal Mass Ejection (CME).

Tip: you can inspect the images with the magnifier.

Step 2

How long would it take for a solar storm to reach Earth?

((De)Accelerated Linear Movement)

Figure 31: Chart that students should obtain when representing the position against time

Note: The real movement of the ejection does not have this constant acceleration, but rather it decreases due to the friction with the interplanetary medium, especially with the solar wind that is in its path. In the Figure 32 we can see the density of this material, and also the velocity distribution as the ejections move away from the Sun.

Figure 32: Velocity-Distance to Sun Chart (Credits: SpaceWeather)
